

Patient Name: Kathryn Copeland

Date: September 11, 2025

Provider Name & Credentials: Kim Tran, M.D.

Facility: UT Southwestern Medical Center
600 S Main St 3rd Floor, Suite 500
Fort Worth, TX 76104

To Whom It May Concern,

I am the primary care physician for Kathryn Copeland. She has been under my care for multiple chronic medical conditions that significantly impair her daily functioning, including hypermobile Ehlers-Danlos Syndrome (hEDS), Postural Orthostatic Tachycardia Syndrome (POTS), Mast Cell Activation Syndrome (MCAS), [REDACTED] immune system abnormalities (hypergammaglobulinemia), [REDACTED] and complications from toxic mold exposure.

These conditions collectively cause severe fatigue, post-exertional malaise, autonomic instability, chronic pain, tremors, migraines, visual disturbances, and cognitive dysfunction (slowed processing, memory impairment, and brain fog). Even minimal exertion can trigger symptom flares requiring extended rest.

Since early 2025, Ms. Copeland's health has worsened. She was displaced from her home in June/July 2025 due to toxic mold and has been forced to live in unstable hotel housing. This disruption prevents her from accessing prescribed home health services, therapy, and ongoing medical care, further compromising her health.

[REDACTED]

[REDACTED]

[REDACTED]

Sincerely,

Kim Tran, M.D.

RE: Medical Statement for Disability Application

To Whom It May Concern,

[REDACTED]
[REDACTED] She has been under my care at UTSouthwestern since October 8, 2024, for Hypermobility EhlersDanlos Syndrome (hEDS), Mast Cell Activation Syndrome (MCAS) and Postural Orthostatic Tachycardia Syndrome (POTS). These are severe chronic illnesses that significantly impair her daily functioning [REDACTED]

In addition to these primary conditions, review of her medical records shows she is also being treated for the following chronic and compounding illnesses: [REDACTED]

[REDACTED] Hashimoto's disease with severely low iron requiring three iron infusions, bilateral vision loss and binocular dysfunction linked to toxic mold exposure, [REDACTED] and immune abnormalities including hypogammaglobulinemia.

Her July 2025 evaluation by Dr. Alfred Johnson documented toxic mold exposure with extremely elevated levels of Aspergillus, Chaetomium, and Stachybotrys. He noted severe chronic fatigue (up to 18 hours/day bedridden), 30 lbs of weight loss, cognitive impairment, and hyperbaric oxygen therapy and urgent need for relocation.

Since my prior March 2025 statement, Ms. Copeland's health has further deteriorated. She was displaced in June/July 2025 due to mold contamination and has been forced to live in a hotel. This unstable housing situation prevents her from accessing home health nursing and supportive services previously prescribed, further worsening her decline.

She continues to experience severe and disabling symptoms, including: • Severe systemic inflammation.

- Persistent fatigue and post-exertional malaise.
- Orthostatic intolerance, dizziness, tremors, and frequent migraines.
- Neurological and sensory issues, including visual disturbances and light sensitivity.
- Severe GI impairment with ongoing nutritional instability.
- Cognitive dysfunction, including impaired memory, slowed processing, and executive dysfunction.

This

lack of resources is directly worsening her health and preventing her from accessing prescribed care.

In my professional opinion, Ms. Copeland remains unable to perform sustained work activity and is in urgent need of financial and medical support to stabilize her living conditions and prevent irreversible decline.

Sincerely,

 9/10/25

Isabel Huang, MD
