Katie,

You can search licenses at this link below. They don't come up with a search for the company name. It is possible that they have a licensed MRC on staff, but you would need a name to look it up.

You could call and ask them for a copy of their license and then look it up at the link. Their website doesn't mention mold.

Dear Dayna,

Thank you again for explaining the distinction between scattered spores and active growth — that really helped me understand the cleanup options more clearly.

Because I have multiple medically diagnosed conditions (including connective tissue, immune, and mast-cell–related disorders that make me highly reactive to environmental contaminants), I need to ensure that all cleaning and handling of my belongings meet the highest safety standards.

You mentioned that contents should be cleaned by a licensed mold company following EPA guidelines. Do you happen to know whether Reign Restoration is properly licensed under the Texas Mold Remediation Company registry, or if they would meet those requirements? They were the ones who removed and stored my belongings, and I'm trying to verify whether the proper containment and cleaning standards were followed.

If you can't confirm directly, could you point me to the best way to verify a company's license status?

I appreciate your time and the professionalism you've shown throughout this process.

Warm regards,

Katie Copeland

Katie,

Your contents were affected by "scattered spores" which settle on surfaces like dust. This differs from contents that had water damage and mold growing on them. Mold must have water and a food source to become active and proliferate on a surface.

In your case, all of the contents should be considered cleanable.

All soft contents (clothing, bedding, etc) should be washed with water and detergent if possible according to the manufacturer's instructions.

Solid non-porous surfaces are HEPA-vacuum and damp-wipe.

Cloth furniture and carpets can be steam-cleaned.

This work should be completed by a mold-licensed company who is trained in content cleaning per the EPA guidelines.

A contents assessment would not be helpful as I would have to take a lot of surface samples that probably wouldn't show anything significant. Even if surface samples showed mold spores on the contents, they are still cleanable.

Thank you again for sending your reports — they were really helpful. I'm in a difficult spot right now because the landlord had most of my belongings taken out of the apartment by Reign Restoration, and I'm not sure what was handled correctly or what can safely be salvaged. Some items are still sitting in storage on-site, and a few are left on the balcony.

Could you help me understand how decisions are normally made about what can be cleaned versus what should be discarded after mold contamination? I want to be sure I'm following the right process and using licensed professionals if anything can be restored.

Also, would you or your company be able to do a **contents assessment** for me if I hire you directly? I really just need clear documentation of what's salvageable and what's not, based on proper standards.

I appreciate your time and the professionalism you've shown through all of this. You've been one of the few people who's helped me understand what should have happened, and that means a lot.

Sincerely,
Katie Copeland

Katie,

Please see attached reports. The remediation protocol was sent on 9/8. I was not initially made aware of the area by the front door but did go back and do an inspection of that area on 10/17. My swab sample collected by the front door on 10/17 did not find any *Stachybotrys* or anything unusual. I've attached my re-inspection report of that area. I did suggest that the baseboards and drywall in that area could be removed to further inspect.

For the contents - the remediation protocol calls for the contents to be packed-out of the apartment and cleaned according to EPA guidelines. The contents needed to be moved out so that the remediation company had room to perform a full environmental cleaning on the entire apartment.

I hope this information is helpful to you.

Ms. Boor,

I hope you're doing well. I received what appears to be your September 8, 2025 Mold Assessment and Remediation Protocol for Weinstein Properties – Unit 2145, Bowery at Southside.

Could you please confirm that this is your report? If so, would you prefer to provide a cleaner version with all components, including lab results, so I can be sure I'm reading it accurately?

Do your records indicate when and to whom the report was delivered? I assume it was shortly after completion, but I want to make sure I understand the timing correctly.

Your report notes that the client requested the assessment following a water loss from the HVAC condensation drain line affecting the mechanical closet and guest bedroom. Were you provided with or made aware of any prior mold assessments or lab findings from BioTex Inspections in June 2025, particularly results showing *Stachybotrys* or other toxic mold near the front door?

Finally, does your remediation protocol specify that licensed mold remediation is

required and that contents should not be removed until clearance testing confirms safety? The area of contents cleaning is a bit foreign to me so I want to get an understanding of how my belongings are meant to be handled.

I appreciate your time and professionalism. I'm not asking for confidential opinions—just confirming a few factual details for accuracy.

Sincerely,
Katie Copeland

Katie,

I can only release reports to the client who hired me. In this case, the property management company. Have you asked them for it?

Subject: Mold Assessment and Protocol

Hello,

I am the tenant at at 220 E. Broadway #2145, Fort Worth, TX 76104.
May I please have a copy of the mold assessment report, lab results, and protocol completed in early September? I am especially curious about the findings of the lab tests on my belongings.

Sincerely,
Katie Copeland
