

Date: May 13, 2026

To Whom It May Concern:

I am Kathryn Copeland's home health physical therapist. I currently see her twice a week. I have personally evaluated and treated her on three occasions to date, and she was also seen once by my supervising physical therapist. I am familiar with her presentation and with the treatment goals we have established for her care.

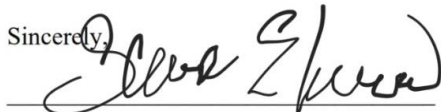

Ms. Copeland's treatment is informed by her existing medical record, including the referral from her primary care provider, Dr. Kim Tran and the letters of her treating physician Dr. Isabel S. Huang, M.D. (UT Southwestern Medical Center), dated December 21, 2025 and February 25, 2026, which document her diagnoses of hypermobile Ehlers-Danlos Syndrome, Postural Orthostatic Tachycardia Syndrome, Mast Cell Activation Syndrome, and related conditions. My observations are consistent with that record.

Based on my work with Ms. Copeland, I support the following accommodations as appropriate and beneficial to her care:

- Access to hydrotherapy (heated pool or therapeutic bath with jets) for joint mobilization, pain management, and conditioning consistent with her diagnoses.
- An adjustable bed and the supportive braces she currently requires to maintain joint stability and tolerable sleep positioning.
- Stable housing that does not require Ms. Copeland to navigate stairs to reach her bedroom or primary living space. Stair use exacerbates her joint instability and orthostatic symptoms. (Stairs for other household members, such as her children's rooms, would not raise the same concern for Ms. Copeland's care.)

I have also observed the impact of Ms. Copeland's current circumstances on her clinical presentation. She has reported, and her presentation in session is consistent with, significant stress and physical symptom flare associated with lack of stable housing, lack of reliable transportation to appointments, lack of funds for medications & supplements, and lack of consistent access to her medical equipment. In my clinical experience, patients with conditions like Ms. Copeland's regress functionally when these basic supports are absent.

If the Court has any questions, I am available to clarify or supplement this letter.

Sincerely,

Sarah E. Lucero, LPTA
